Water Landscapes for urban spaces

# URBANWAVE

Immediate transformation of squares and urban spaces through water architecture

The Urban Water Parks of Amusement Logic introduce water as **architectural material** to revitalise squares, boulevards, and urban centres. Through fluid arches, vertical sheets, interactive jets, and habitable areas, we transform dry and bland spaces into cool, dynamic, and socially intense places.

These are **prefabricated**, highly resistant systems designed to be installed **without civil works**, directly on the existing flooring.

Water appears in the form of mist, vertical curtains, or interactive games, creating a sophisticated and accessible sensory experience for all ages.

A new generation of urban spaces where sculptural design and water work together to offer **shade, coolness, urban life, and permanence.**

# URBANWAVE

## Sculptural Water Structures

The curved and continuous pieces function as **inhabitable architectures** that integrate water inside: vertical sheets, enveloping curtains or gentle cascades that provide refreshment without the need for a pool or depth.

Their iconic presence completely redefines the square, offering shade, coolness and a focal point recognisable from a distance. Manufactured in prefabricated modules, they can be configured in series, sequences, or unique pieces depending on the size of the space.
